

CJ Hopper Series Pumps are your high viscous to compacted substances pumping solution

- Pumps are able to transfer materials and mixtures containing high percentages of solids or abrasives.
- With a continuous low-pulsation, handling of materials is unaffected by fluctuations in pressure and viscosity.
- Various hopper sizes available.
- The wide-open hopper design ensures that the mixture is fed directly into the progressing cavity pumping elements for optimal efficiency.
- Easy maintenance due to quick access to the joints and plug-in connection.
