

The CP Pump line, also known as wobble stator pumps, are designed for low flow or transfer duties in both domestic and industrial applications.

- Progressive cavity pump principle ensures steady output pressure and non-pulsing flow
- Available in bareshaft or close-coupled to a motor
- High quality stainless steel rotating parts
- Both horizontal and vertical suction housings available
- High quality stainless steel rotating parts
- Rebuild kits are offered in Buna, EPDM and Viton® elastomers
- Stator barrier available for negative vacuum applications
